Circulation: 40, Send articles to: Daniel Klos, W404 Cty K, Brillion, WI 54110, 864-7948</p>	<p>the meeting. It's halfway between meetings. This should give our writers time to contribute after a meeting while ideas are fresh and time for the readers to digest the ideas before the next meeting. Most people should receive the newsletter by the third wednesday of the month.</p>
<p style="text-align: center;">Introduction</p> <p>Hopefully this is the first of many newsletters. Volume 1 Number 1 may be a collectors item someday, so don't be quick throwing it out. Why a newsletter after 20 some odd years of the groups existence? One reason - growth. Our group has been growing rapidly and there are many new members who have not developed the eyepiece ring around their eyes and are not wearing red goggles during the day.</p> <p>The purpose of this newsletter is to share information and experience with others. This may help provide background to our monthly presentations. Anyone is welcome to contribute to the newsletter. If your english is poor, that's okay - someone will edit it. If you make glaring mistakes - someone will probably catch it before mailing. If you want it unedited, unreviewed as is - we can accept that. So don't hesitate - write! I personally did poor in English in both high school and college and it wasn't until I starting writing letters on a regular basis did my english improve, but I still have a way to go. In conclusion, write an article or column and share your knowledge with the rest of us.</p> <p>We can't guarantee that a newsletter will be sent every month, but we'll try hard. If you don't get a newsletter for some month, don't fret, probably no one else did either.</p>	<p style="text-align: center;">Future Columns !!</p> <p>We hope to have columnists in is this low budget newsletter. Steve Mofle has agreed to do a column on solar system reporting, i.e. Jupiter's moons timings, planetary visual recording. Dan Sheber has volunteered to do a column on deep sky objects and lunar occultations. Ron Parmentier will contribute on a regular basis. George McCourt will do articles on mirror making. This is not the complete list. Don't be suprised if YOU get a phone call from the editor asking for your expertise to be put on paper.</p>
<p style="text-align: center;">Newsletter Name Contest</p> <p>The newsletter needs a permanent name. I just made up this one on the spur of the moment. Please send your entrys to the editor. Thanks.</p>	<p style="text-align: center;">Last meeting Events</p> <p>There was a discussion on planned events for 1989. We observed slides of astrophotography.</p>
<p style="text-align: center;">The evil DEADLINE</p> <p>Every publication has a deadline or else nothing would get published. Our deadline is the second Wednesday of the month, two weeks before</p>	<p style="text-align: center;">Next meeting Events</p> <p>There will be a talk on occultation observing. Meeting date Nov 23 Time 7:00pm at Neville Public Museum.</p> <p style="text-align: center;">When will the clouds go away?</p> <p style="text-align: center;">Filter testing program</p> <p>The filter study has now been approved by Dave Eichert of Deep Sky magazine!</p> <p>Our astronomy club has been asked to conduct a study of nebulae and sky pollution filters. We have already had a meeting and a proposal was created. A letter and proposal was sent to Deep Sky. Letters to the manufacturers requesting filters and data are on the way. Our deadline is Feb 1, 1989.</p> <p>Anyone wishing to help on this worthwhile project, Call Dan Sheber.</p>
